

ALARM OPTION

You want to save money and produce with the injection moulding machine without someone to watch over the production?

We developed special for our colouring units the possibility to stop the injection moulding machine in case of a failure of the colouring unit.

Either a failure of the mixing- or dosing motor, or the masterbatch stock is below level the injection moulding machine will automatically stop!

Consider how much it will cost you if the production during one night can be disposed as regrind?

We can offer you this alarm option in combination with a new Hydraclor colouring unit.
